As part of our ongoing coverage of Identification and Access Markets (IAM) and Privileged Access Management (PAM), we try to keep a close eye on the numerous and individual solution providers that make up both sectors of the cybersecurity world. The keyword here is different: no two IAM or PAM vendors offer exactly the same products and services, each has its strengths and weaknesses, sizes and tricks. While it is natural for the latest innovations and gadgets to take the most collective attention, there must also be recognition of the pillars of markets. ALERT: Cyber threats don't rest, even during global pandemics. You can learn more with the Solutions Review Identity Management Guide and our other resources. The following vendors have recently been named leaders in the 2020 Gartner magic quadrant to manage privileged access. Although each company's market share is different, these tools form the backbone of the PAM market according to Gartner. Their report shows that the success of these suppliers over time serves as an inspiration and guide for new suppliers entering the PAM field. These providers stand out as the cornerstones of the market, offering tools for a wide range of uses, and thus the Gartner report worthy of the title of leader. 4 Leaders in 2020 Gartner Privileged Access Office Magic quadrant 4 Leaders Gartner named in their report are: BeyondTrust offers privileged remote access, a platform that provides a mature and easy-to-deploy solution to support administrators and third-party users requiring remote privileged access. Centrify offers a complete solution for remote privileged access based on SaaS, which makes the software installed by the customer obsolete. They also provide a solid roadmap for new features. CyberArk gets attention for its wide range of features and its secret broker to expand the capabilities of its secret management tool. Thycotic gets praise for its technical support, user-friendly interface, and ease of installation and configuration. You can read the full 2020 Gartner Magic quadrant for privileged access management here. NOW READ: 19 Best Password Managers for Users and Businesses: Final List Tagged August 10, 2020 11:09 AM Eastern Daylight Time NEWTON, Ma.M. - PETACH TIKVA, Israel-- (BUSINESS WIRE)-CyberArk (NASDAQ:CYBR), today announced that it has been named leader in Gartner 2020 Magic quadrant for privileged access management, positioned as the highest in ability to perform and further in fullness of vision for the second time in a row. CyberArk provides the most comprehensive solution to protect privileged accounts, accounts, and privacy related to people and machines in cloud and hybrid environments. As a global leader in privileged access management, CyberArk enables organizations of all sizes to reduce risks, improve operational efficiency, and safely apply modern technology and including cloud, DevOps, and process automation to transform your business. This report confirms that the privileged access management market continues to mature with accelerated adoption, said Marianne Budnick, CMO, CyberArk. With privileged access management as a foundation, CyberArk's identification security strategy provides innovative solutions that support customers' ability to navigate a dynamic and often unpredictable business environment while maximizing existing resources and protecting against emerging cyber threats. Gartner Peer Insights documents customer experience with proven assessments and expert assessments from enterprise IT professionals. For this period from March 25, 2020, CyberArk reviews include: I have been working with CyberArk directly for over six years. CyberArk was the best provider I worked for in my 20 year IT career. CyberArk has a clear vision and open communication regarding products and support. CyberArk delivers excellent products that lead the industry in managing privileged access. - IT Security Manager, Financial Industry read a full review We are deploying CyberArk to meet the security management needs in our applications, and then after strong adoption by our NIOGRO team, it has been pushed into manufacturing and infrastructure. The solution addresses all of our needs and covers future expectations such as selective remote access management (Vendor - Alero) or our move to IaaS with Conjur, or SaaS for Enterprise Applications (PSM for Cloud) - Senior Manager - Corp IAM Lead Program. Manufacturing Industry Read a Full CyberArk Review helps us identify important threats and vulnerabilities and ensure that these vulnerabilities are addressed before anything bad happens. Tackling and overcoming our weaknesses is a more preventive solution. This made it easier to manage the passwords of privileged accounts and service accounts that are currently unable to work with password and session management solutions. In addition, we can record all access to our physical or virtual servers. So everything is now under control and we have no concern for safety. - Network and Security Engineer, Services Industry (read the full review) To download a free copy of Gartner 2020 Magic quadrant for privileged access management. CyberArk CyberArk (NASDAQ:CYBR) is a global leader in privileged access management, a critical level of IT security for protecting data, infrastructure and assets in cloud and hybrid environments, and throughout the DevOps pipeline. CyberArk provides the most comprehensive solution in the industry to reduce the risk created by privileged credentials and secrets. Companies trust the world's leading organizations, including more than 50 percent of the Fortune 500, to protect against external intruders and malicious insiders. A global company, CyberArk, headquartered in Petah Tikva, Israel, is headquartered in Newton, Massachusetts. The company also has offices throughout America, REGION EMEA, Asia Pacific and Japan. To learn more about CyberArk, visit web, read CyberArk blogs or follow twitter via @CyberArk, LinkedIn or Facebook. Copyright © 2020 CyberArk Software. All rights are reserved. All other trademarks, product names or trademarks belong to their respective owners. Today we announced that CyberArk has been named the leader in the Gartner 2020 magic quadrant for privileged access management.1 CyberArk has been ranked as the highest in ability to perform and further in full view, for the second time in a row. First of all, we want to thank our customers, partners and employees for being the basis of our success. You are what motivates us, every day. Our mission is to continue to improve security for our more than 6,000 customers as they transform their business digitally. This is what drives CyberArk to constantly innovate and drive to find new ways to reduce risk for these global organizations, all while providing superior user experience focused on improving productivity and creating new tools that move their business forward. We know that the world is working in a new way, but what hasn't changed is the path of attack that constantly targets the most valuable assets of the business. Organizations can't stop attacks if they don't provide privileged access everywhere: in the cloud, on endpoint devices, in applications, in automated processes, and throughout the DevOps pipeline. Moreover, the security of privileged access should include the company's remote employees, as well as all of its supply chain partners, as well as their domestic workers. We are proud of our achievements over the past year, which include new precision access opportunities that complement the broader strategies of the least privileges; Alero, our remote user-based solution which combines access to zero trust and biometric multi-factor authentication; and providing the industry with a wide portfolio of SaaS-based solutions to manage privileged access. I'm particularly excited about performing on on Identity Security vision, which begins with zero trust and uses artificial intelligence to understand context and intentions. This approach will help organizations significantly reduce risk while providing an unobstructed user interface that reliably enables the business and supports any device, application or user - regardless of role or location. In addition to the Magic quadrant, Gartner also published an accompanying report: 2020 Critical Opportunities for The Management of Privileged Access, it states, Gartner has identified PAM as the top 10 security controls, and the market continues to grow at double-digit rates. At CyberArk, we believe it is important to continue to emphasize the importance of PAM as critical to the organization's cybersecurity strategies and strategic risk management initiatives. That's true, now, more than ever before.
